322 Compilers Assignment: `spill`
Register allocation: spilling

Your job: Implement spilling. See the spill-test assignment for details on how the spilling script should behave.

Handin instructions: Your handin must run on the t-lab machines (under linux).

Hand in your assignment by uploading it to the server at `http://penghu.eecs.northwestern.edu:8123/`. The uploaded file should be a gzipped tar file named *name*.`spill.tar.gz`. The *name* should be your family name in all lowercase letters unless you are pair programming, in which case it should be both family names in alphabetical order, separated by `+`. If your name has any non-alphabetic characters, remove them first. For example, if Conan O'Brien and Shawn Knowles-Carter were pair programming and handing in this assignment, they'd send in a tarfile named `obrien+kowlescarter.spill.tar.gz`.

The attachment must contain (at the top-level) the `spill` executable.

Feel free to submit revised versions of earlier assignments (in the same format as was asked for that assignment). They will be re-run in the test fest for this week.
