The indent package[*]

Abstract

Make the first line of all sections etc., be indented by the usual paragraph indentation. This should work with all the standard document classes.

`\if@afterindent` LaTeX uses the switch `\if@afterindent` to decide whether to indent after a section heading. We just need to make sure that this is always true.

```
⟨*package⟩
\let\@afterindentfalse\@afterindenttrue
\@afterindenttrue
⟨/package⟩
```
